Wed, 05 Dec 2018 15:48:00 GMT signals and systems for bioengineers pdf - In electrical networks, a parasitic element is a circuit element (resistance, inductance or capacitance) that is possessed by an electrical component but which it is not desirable for it to have for its intended purpose. For instance, a resistor is designed to possess resistance, but will also possess unwanted parasitic capacitance.. Parasitic elements are unavoidable. The central nervous system (CNS) barriers are essential interfaces between the CNS and the periphery. The most selective one is the blood brain barrier (BBB), being mainly composed of endothelial cells connected by tight junctions (TJs) and adherens junctions (AJs). In some brain pathologies (e.g. brain infections, neurodegenerative disorders, and stroke) the BBB is altered ...
