By an IUPAC definition, solvation is an interaction of a solute with the solvent, which leads to stabilization of the solute species in the solution. In the solvated state, an ion in a solution is surrounded or complexed by solvent molecules. Solvated species can often be described by coordination number, and the complex stability constants.

Introduction - An aqueous solution is a solution in which the solvent is water. It is mostly shown in chemical equations by appending (aq) to the relevant chemical formula. For example, a solution of table salt, or sodium chloride (NaCl), in water would be represented as  $\text{Na}^+ (\text{aq}) + \text{Cl}^- (\text{aq})$ . The word aqueous (comes from aqua) means pertaining to, related to, similar to, or dissolved in, water.
